Public Cloud-based Disaster Recovery for a Top 20 Global Fortune 500 Company

A top 20 global fortune 500 company is moving their infrastructure to multi-cloud environments. Along with this, they transformed their legacy disaster recovery services to a cloud-based disaster recovery environment.

The criteria or requirements that they used to choose their cloud-based disaster recovery solutions was as follows.

- Cost benefit outweighed the legacy VM-based disaster recovery solution

- To change CAPEX infrastructure to OPEX services using a cloud platform

- To minimize their cloud credit consumption for disaster recovery services in a normal business environment.

At-a-glance:

Customer: Top 20 Global Fortune 500 company

Customer Size: 300,000+

Industry: Manufacturing

Products and Services: ZConverter

Cloud-agnostic Disaster Recovery Technology

Customer challenges

A Global Fortune 500 Company planned a cloud disaster recovery project which was able to achieve cost savings, on-demand subscription and near-zero cloud credit consumption during normal working hours.

They tried to use a competitor's legacy disaster recovery solution for the beginning stages of their project. They were unable to protect Linux workloads and couldn't support near-zero cloud credit consumption capabilities.

ZConverter's Solution

They turned to ZConverter. ZConverter met all the customer's cost savings and on-demand disaster recovery requirements.

ZConverter's cloud-agnostic Imaging technology was able to protect all Linux and Windows workloads. Additionally, ZConverter's Serverless Disaster Recovery capabilities enabled them to implement near-zero cloud credit consumption disaster recovery services during working hours, saving them millions of dollars in cloud consumption fees.

Customer Benefits

Painless Cloud Disaster Recovery Services using ZConverter's cloud-agnostic imaging recovery technology

Serverless Cloud Disaster Recovery using cloud-agnostic DR Technology

Uniform Cloud Disaster Recovery using cloud-agnostic DR technology

Cost Savings up to 50% compared to VM-based DR
